Dear Chris

Proposed Tension Structure.

DECK AREA

We have much pleasure in submitting our price to supply and install a shade structure as shown on our attached drawing :

**Playground area : Supply and Installation of one Sail Shade Panel
covering 72 square metres and four powder coated steel poles.
Includes Engineering Certification.**

\$8,500.00 + 10% GST \$850.00 = Total \$9,350.00

Fashionable Shade Sails are made from a long wearing shade knit fabric which block out 95% of the sun's harmful rays and allows the designer enormous flexibility to create a strong purpose built structure with striking visual appeal.

Fashionable Sail Shades are a low maintenance product which create a shaded ambience during the summer and the seasonal flexibility of storing them away during the winter. They are designed in accordance with your specific requirements and budgetary needs and are engineered to withstand high winds, hail, torrential rain, high temperatures and most importantly UV radiation.

Creative Design

A total in-house design team creates individual, exciting and purpose built structures that blend and enhance existing buildings or make striking architectural statements as freestanding installations.

Unique Tensioning System

The tensioning system has been developed after extensive testing and product research of the specific inherent qualities of shade fabrics. No other system can provide a comparable combination of strength and adjustability to facilitate permanent, non creep, non sag appearance.

No Wear Points=Maximum Life Expectancy

Shade fabrics need to be protected from contact with metals and sharp objects. Heat transference between metal frames or wire cable is well known to cause the premature failure of fabric. Fashionable Sail Shades offers a unique system that has eliminated all direct metal contact enabling the fabric to provide maximum life expectancy.

Long Life

Materials used for all Fashionable Sail Shade structures are chosen for long life so that each product will provide many years (>10) of trouble free use. Those materials which are sensitive to ultra violet radiation are formulated with long life UV inhibitors to ensure maximum life expectancy, matching that of the shade fabric. Only the best quality, high tensile strength thread is used for structural seams.

Specifications

- Commercial 95 fabric in a colour(s) of your choice.
- 50mm black polyester webbing edge catenaries.
- Connected with stainless steel fittings.
- 1/3 black polyester Synton sewing thread.
- Powder coated steel CHS posts.
- Excavation, soil removal & landscape rectification.
- 3 year warranty on all workmanship.
- 12 year manufacturer's warranty on shade fabric against UV degradation.
- Engineering Certification..

Soil Conditions

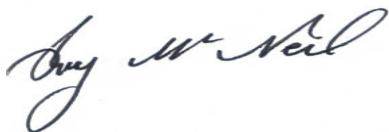

For the purpose of this quotation we have assumed that the soil conditions are suitable for our standard column and footing designs. should this not be the case an additional fee may be charged for any alteration to the specifications, i.e. to cover the costs associated with larger footings and or columns.

Exclusions :

- excavation into anything other than normal soil, ie. unstable rock and sand.

We trust that this meets with your approval and thank you for the opportunity to quote on this construction.

Yours sincerely,

Roy McNeil
